Speed Brush

The Speed-Brush is a towable grooming machine designed to work in natural and synthetic turf applications. Its two round brushes rotate opposite of the direction of travel, effectively brushing sand into the aeration holes or redistributing infill into an artificial turf playing surface. The Speed-Brush will also successfully decompact and restore fibers in synthetic fields that have been packed down with time. The Speed-Brush is an excellent tool for standing matted turf on a golf green providing a more even cut that will result in a superior putting surface. The Speed-Brush is a simple device that can be pulled with most any prime mover, has quick adjustments and will work with wet or dry sand.

SPECIFICATIONS	DESCRIPTION
Working Width	56in (140 cm)
Total width	70in (178 cm)
Weight	400lbs (181kg)
Vehicle requirement	10 hp with 12 volt + Elec. Connection
